Notes applicable to all tables:

February 1, 2005

All counts are "adjusted" numbers of families and children unless otherwise indicated. These "adjusted" numbers represent the number funded through CCDF only. The "adjusted" number is the raw or "unadjusted" number reported by the State multiplied by the pooling factor as reported on the ACF-800. A few States have indicated that the pooling factor reported on the ACF-800 is not applicable to the ACF-801. This report takes all these factors into consideration in calculating the "adjusted" numbers.

Notes applicable to this table:

1. The source for this table is ACF-801 data for FY 2003.
2. The "adjusted" numbers were obtained by multiplying the respective "unadjusted" numbers by the reported pooling factor percentage that was applicable to the ACF-801 data.
3. The reported results shown above have been rounded to the nearest 100. The national numbers are simply the sum of the State and Territory numbers.
4. All states provide an actual count of families served. However, the number of children served is not a direct count based on the fact that some States elect to submit sample data versus full population data. For States that submit samples, the ratio of children-to-families is determined and then multiplied by the number of families served to obtain an estimate of the number of children served.
5. Puerto Rico and the Virgin Islands were unable to report ACF-801 case-level data before report preparation.
6. On an ongoing basis, CA serves a significant number of families and children through State funds. Beginning in FY 2002, CA recognized and corrected their reporting to show that only 86% of families and children are being served through CCDF (as opposed to 100%). The other 14% are actually being served by non-CCDF funds. Prior to FY 2002, NY reported children based on a payments system which allowed for a child to be counted more than once. Beginning with FY 2002, NY revised their reporting system. This has had the effect of eliminating double-counting. These changes lowered the national child counts by nearly 100,000 for FY 2002 and FY 2003 as compared to what was reported for FY 2001.
